## RESEARCH INTERESTS

---

My research examines the governance mechanisms of online platforms to understand how their design, technical affordances, and policies affect public discourse. I use a mixed methods approach, combining system building, casual inference of large-scale social media data, surveys, and interviews to explore how platforms can address societal issues such as online harassment and the rise of hate groups.

## RESEARCH EXPERIENCE PRIOR TO RUTGERS

---

### RESEARCH ASSISTANT

- **School of Interactive Computing**, Georgia Institute of Technology 2015 – 2020  
I used computational techniques, surveys, interviews and participant observations to understand key aspects of sociotechnical systems, such as how content moderation occurs on social media websites and how users perceive and react to different moderation mechanisms.
- **Department of Computer Science**, University of Texas at Dallas 2013 – 2014  
I developed a framework to perform setwise classification on streaming data by designing an ensemble of models that addressed the challenges of concept drift, concept evolution, and storage limitations. I used this framework to conduct real-time sentiment analyses of Twitter posts.
